## HAZARD ASSESSMENT

| TASKS<br>(list all tasks/activities of the job/position)                                                     | HAZARDS<br>(list all existing and potential HS hazards)                                                           | Risk Factor | Severity | CONTROLS<br>(List the controls for each hazard: elimination, engineering, administrative, PPE)                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|-------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Site Walkthrough          | Ground conditions, holes, gravel, pavement, tripping hazards, toys, tools, equipment, animals, vehicles           | 2           | YELLOW   | Note ground conditions, soft spots, holes, drop offs, flower beds. Clear walkways and path of travel, have vehicles removed, communicate about pets, attention to walkway.<br><u>PPE:</u> Appropriate footwear, gloves, safety glasses                                                                                                               |
|  Electrical Considerations | Bad breakers, loose connections. Arc flash, electrocution, hidden/buried lines                                    | 4           | ORANGE   | Inspect work area. TEST BEFORE TOUCH, notify customer before power shut off, remove panel cover and inspect for loose wires before working in panel, inspect breakers, locate hidden obstructions behind insulation or drywall before drilling.<br><u>PPE:</u> Rubber sole shoes, electrical meter, gloves, safety glasses                           |
|  Ladder set up             | Muscle strains, wind, tipping over, property damage, pinch points, ladder damage, bottom slip out                 | 4           | ORANGE   | Two person carry, be aware of wind direction and strength, hold ladder until it is completely secure, be aware of hand position, hands clear when raising/lowering, if icy or slippery, secure the bottom of ladder with strapping, 3 point contact.<br><u>PPE:</u> gloves, safety glasses, appropriate footwear                                     |
|  Anchor Installation       | Initial installation without tie off, incorrect installation, slips, trips, falls                                 | 4           | ORANGE   | Ground safety watch, use hook ladder to access ridge, install first anchor remaining on hook ladder at all times, anchor in to install remaining anchors, dedicated most competent person on each crew for initial access, slow, steady ascent, awareness.<br><u>PPE:</u> gloves, appropriate climbing footwear, harness, lanyard, rope and grab     |
|  Roof Work/ Installation   | Working at heights, slips, trips, falls, rope management, pinch points, dropped tools/material, suspension trauma | 4           | ORANGE   | 100% tie off above 10ft, don't cross ropes, manage slack, be aware of foot position, be aware hand placement, secure tools and materials, use tool lanyards, trauma straps for each foot attached to harness.<br><u>PPE:</u> soft rubber soled shoes, gloves, safety glasses, harness, lanyard, rope & grab                                          |
|  Electrical Work           | Attic work, Asbestos, bad breakers, loose connections, arc flash, hidden wires, electrocution, cuts, pinch points | 4           | ORANGE   | Wear PPE in attic, be aware of foot position in attic, heat exhaustion in summer, inspect breakers, inspect connections, never work in a live panel, hands in sight.<br><u>PPE:</u> N95 or better mask in attic, gloves                                                                                                                              |
|  Weather Considerations    | Rain, snow, wind, lightning, freeze/thaw cycles                                                                   | 3           | ORANGE   | Be aware of changing weather, make sure all loose material secured. 30/30 lightning standdown, extra caution in snowy, foggy or rainy conditions, assess work area before commencing work, snow removal use extra caution, dress appropriately, microbreaks.<br><u>PPE:</u> gloves, footwear, shovels, brooms, rain gear, second set of dry clothing |
|  Material Storage          | Slips, trips, falls, property damage, material damage, cuts, scrapes, strains, sprains                            | 3           | ORANGE   | Ensure all material is staged out of walkways, stacked neatly so it can't fall or damage property, keep scrap material organized, remove sharp edges, remove trip hazards.<br><u>PPE:</u> gloves, safety glasses, footwear                                                                                                                           |
|  Material handling         | Muscle strains, body positioning, weight limits, slips, trips, pinch points                                       | 3           | ORANGE   | Stretch before working and lifting, proper lifting techniques, team lift over 50lbs, clear path of travel, hand positioning and communication, spotter, flagger.<br><u>PPE:</u> footwear, gloves, hi visibility vest if in traffic areas                                                                                                             |
|  Driving/ Transportation   | Road conditions, material securement, alertness, distracted driving                                               | 4           | ORANGE   | Drive according to conditions, secure all material/equipment prior to transportation, only operate well rested and alert, rest after long periods of driving, no cell phone use.<br><u>PPE:</u> Vehicle pre use inspection/walkaround, hi-vis vest, traffic cones, handsfree                                                                         |

# RISK FACTOR MATRIX & CREW SIGN-OFF

Risk interpretation, action thresholds, and acknowledgement

**LIKELIHOOD**  
How likely is the hazard to occur?

×

**SEVERITY**  
What is the potential outcome if it does?

=

**RISK FACTOR**  
Multiply likelihood by severity to determine the risk factor.

In the table below, find the zone that aligns with both the severity and likelihood chosen. The color indicates the risk factor. **Example:** Possibly + Major = Orange Zone (Minor/Moderate Risk).

| LIKELIHOOD<br>(Probability)                           | SEVERITY (Consequence)      |                  |                        |                  |                          |
|-------------------------------------------------------|-----------------------------|------------------|------------------------|------------------|--------------------------|
|                                                       | Marginal<br>(Insignificant) | Minor<br>(Minor) | Moderate<br>(Moderate) | Major<br>(Major) | Severe<br>(Catastrophic) |
| Almost Certain<br>(Occurs in most circumstances)      | 3                           | 3                | 5                      | 5                | 5                        |
| Likely<br>(Will probably occur in most circumstances) | 1                           | 3                | 4                      | 5                | 5                        |
| Possibly<br>(Might occur at some time)                | 1                           | 1                | 3                      | 4                | 5                        |
| Unlikely<br>(Could occur at some time)                | 1                           | 1                | 2                      | 4                | 4                        |
| Rare<br>(May occur only in exceptional circumstances) | 1                           | 1                | 2                      | 2                | 3                        |

**RED ZONE**  
Major/Severe Work Risk  
**STOP WORKING IMMEDIATELY**  
and speak to a manager/supervisor.

**ORANGE ZONE**  
Minor/Moderate Risk  
**Proceed with caution**  
and improve control measures.

**YELLOW ZONE**  
Marginal/Minor Risk  
**Low risk.**  
Proceed with work and maintain existing measures.
